PROJECTS

AI Food Booking Agent

Built an AI-powered food ordering assistant that lets a user pre-order their meal ahead of time. Once the order is placed, the AI agent takes over automatically — it places the order at the appropriate outlet based on the user's current location and completes the payment on its own through an autopay option, so the user doesn't have to step in again once the order is set up. Developed the frontend with HTML and CSS and the backend logic with JavaScript.
